

# A Safe New Way to Whiten and Care for Your Teeth!

By Janet L. Hall, ND, CMI, CKP, AHG, CBT

Now you can have your teeth whitened at the speed of light! LED light, that is. And, prevent decay, root canals, crowns, heal abscesses and much more!

## Teeth Whitening

We have a new, effective and affordable way to whiten and brighten your smile! Our method is becoming America's #1 teeth whitening process and it is *safe and convenient*. This system has perfected teeth whitening by stain removal instead of bleaching!

You simply brush your teeth first, then insert the carbamide solution tray into your mouth and when warmed and activated by our safe LED light, the hydrogen peroxide solution gently penetrates the cellular structure of your teeth to release stains that have built up over time. The hydrogen peroxide solution is so safe; it will not cause harm even if swallowed. Finally a safe, healthy way to whiten teeth! The stabilized hydrogen peroxide neutralizes the properties responsible for sensitivity reactions. *It even works to release stains from veneers, caps, composites and implants, if your*

*teeth are grayish in color or have been stained from prescription drugs or nicotine.*

### Here are just a few of the benefits:

- ✓ Guaranteed instant results
- ✓ Up to 6 shades whiter
- ✓ Only takes 20 minutes
- ✓ Enamel safe!
- ✓ No sensitivity!

So, don't suffer with the pain and sensitive reactions from the usual dental bleaching ever again!

## Dental care

Did you know that you can do preventative care for your teeth, just as you do for the rest of your body? Well, now you can. We have a soft, cold laser with probes that can be inserted into the mouth with programmed frequencies to stop the infection of an abscess, as well as clear infection and heal the root of a tooth that otherwise would require a root canal! Solutions can be lasered into the gums, or in fact, anywhere in your body! Lasers are amazing; work well for many health issues and can be purchased for home use as well.

Most people think that their teeth are one whole piece, but your teeth are actually made up of individual fibers. These fibers, with the right process, can even come back together to heal a tooth that has been cracked! Some clients have returned to their dentist after our treatment and were so happy to hear that their problem can no longer be found!

*We are happy to provide a free consultation and answer your questions. Call us today: 505-294-WELL (9355)*

ENJOY GREAT HEALTH AND SUCCESS!
